5 Cyber Security Myths that need to be Debunked!

**MYTH: “I have a Mac computer, they don’t get viruses.”**

Most Malware and viruses are created to attack PCs and Windows Operating systems but that does not mean that the Mac OS is completely invincible. Mac users still have to be wary of malware that relies on the user falling for a cyber-trap. For example, a Mac users can be fooled into downloading malware disguised as an antivirus program.

**MYTH: “Cyber Security at Hostos is an IT problem.”**

Hostos IT manages and helps to remove any reported online threats within the college community but it is still your personal responsibility to practice safe computing and to protect not only your personal information but the information of others.

**MYTH: “Nobody wants to hack me! I’m not anybody important!”**

Thinking that it can’t happen to you and acting on that falsehood is what leads to falling victim to cyber-crimes. Anyone connected to the internet is at risk of being hacked or falling into a cyber-trap.

**MYTH: “My Antivirus software on my computer is enough to protect me.”**

The best defense for Mac users against malware is to keep your operating system up-to-date.

**MYTH: “My phone is safer than my computer or laptop because it can’t get hacked!”**

Most of the cyber security breaches you hear about involve computers but your smartphone needs protection too! They should be equipped with antivirus software that will help protect it from threats. In addition, you should always practice safe computing on your smartphone as you would on your computers!
