### HOSTOS COMMYNITY COLLEGE DEPARTMENT OF MATHEMATICS

**COURSE:** CSC 215 MODERN PROGRAMMING LANGUAGES

**CREDIT HOURS:** 3.0

**EQUATED HOURS: 3.0** 

**CLASS HOURS: 3.0** 

PRE/COREQUISITE: MAT 210

PRE/COREQUISITE: ENG 93/ESL 91/ESL 93

**OR PREREQUISITE: CSC 205** 

**RECOMMENDED** C++ How to Program (10th Edition) By Paul Deitel &

**TEXTS**: Harvey Deitel ISBN-13: 978-0-13-444823-7

**DESCRIPTION:** This course provides an introduction to problem solving methods

and algorithm development through the study of the program, control structures, and data structures of the C++ programming language. The main aspects of the course include: the concepts of procedural and object-oriented programming, algorithm design, control structures in C++, functions and recursions, arrays, pointers, characters and

strings, structured data, file operations, classes.

Suggested grading policy: A minimum of three quizzes, midterm/project, and comprehensive final exam

**GRADES:** A, A-, B+, B, B-, C+, C, D, I, F.

**Student Learning Obectives** 

- 1) Students will be able to demonstrate knowledge of hardware and software components of computers, and the importance of Secure Coding standards and principles.
- 2) Student will demonstrate ability to formulate and write programs with variables of different data types, using secure coding protocols.
- 3) Students will demonstrate ability to work with input/output variables, characters and strings within contexts of programming
- 4) Students will demonstrate fluency formulating and writing programs with logical operators for decision making
- 5) Students will demonstrate ability formulating and writing programs with recursive loops

6) Students while demonstrate ability to write programs using functions, arrays and pointers

#### **COURSE OUTLINE:**

### Week Topics

## 1 I. Introduction to Computers and Programming

- 1. Computer systems: hardware and software
- 2. C++ development environmennt, programming and debugging
- 3. Secure Coding protocols e.g. hiding data
- 4. Hands on (lab): Introducing the Dev-C++/Microsoft Visual C++ Platform

#### 2 **II. Introduction to C++**

- 1. The parts of a C++ program
- 2. The cout object, variables, constants, the assignment statement, identifiers, comments
- 3. Integer data types, floating-point data types
- 4. Arithmetic operators
- 5. char data type, the string class
- 6. The bool data type

### 3 III. Expressions and Interactivity

- 1. The cin object
- 2. Mathematical expressions
- 3. Multiple and combined assignment
- 4. Formatting output
- 5. Working with characters and string objects
- 6.More mathematical library functions
- 7. Introduction to file input and output

### 4 IV. Making Decisions

- 1. Relational operators
- 2. if, if/else, if/else if statements; nested if statements; menus
- 3. Logical operators
- 4. The conditional operator; the switch statement

## 5 V. Looping

- 1. Increment and decrement, the while loop, counters
- 2. The do-while loop
- 3. The for loop
- 4. Nested loops
- 5. Breaking out of a loop; the **continue** statement

#### 6 VI. Functions

- 1. Introduction to recursions
- 2. Defining and calling functions; function prototypes
- 3. Sending data into a function; passing data by value; the return statement 4. Returning value from a function; returning a Boolean value
- 5. Local and global variables; static local variables; default arguments; the exit() function

### 7 VII. Arrays

- 1. Arrays hold multiple values; accessing array elements; no bounds checking in C++
- 2. Array initialization; processing array contents
- 3. Arrays as function arguments
- 4. 2-dimensional arrays; arrays of strings; arrays with 3 or more dimensions

#### 8 VIII. Pointers

- 1. Getting the address of a variable; pointer variables; the relationship between arrays and pointers
- 2. Pointer arithmetic; initializing pointers; comparing pointers
- 3. Pointers as function parameters

## 9 IX. Characters, Strings, the string Class

#### 10 X. Structured Data

- 1. Abstract data types; accessing structure members; initializing a structure
- 2. Arrays of structures; nested structures
- 3. Structures as function arguments; returning a structure from a function
- 4. Pointers to structures

# 11 XI. Advanced File Operations

### 12 XII. Introduction to Classes

- 1. Procedural and object-oriented programming
- 2. Introduction to classes
- 3. Defining an instance of a class; inline member functions;
- 4. Constructors; passing arguments to constructors; destructors;
  - 5. Private member functions
  - 6. Arrays of objects
- 14 Review
